

NAT --> IP(10.1.3.0) --> temporary IP
For permanent IP for NAT, we allocate Elastic IP.

Incoming traffic --> NAT IP --> Private subnet --> private EC2

NAT IP (10.2.6.0) --> 172.33.53.6(Elastic IP)

Nano command --> creates file, edit file.

Vi --> create file, edit file.

Touch --> create empty file.

Ls -la-->check the permissions for the files present in that path.

Chmod --> change modes

700 --> 7(r-4, w-2, x-1) --> user

0 --> groups

0 --> other users.

For creating Private ec2, use .pem

For creating Public ec2, use .ppk
